

Thank you for entrusting your workers to Minnesota Occupational Health (MOH)! For well over 20 years, our partnerships aim to help you manage the occupational health needs for your applicants and employees. With spring just around the corner, and hopefully COVID soon behind us, we would like to highlight some very exciting and beneficial changes coming to MOH.

Hours of Operation

We anticipate that MOH hours will remain 7:30 am to 4pm because it enables us to maintain a staffing buffer as COVID and home-schooling continues to have an impact on our staff. We will continue to monitor this to see if we can offer earlier drug screens in the future.

Work Performance Testing Expanding in St Paul Location

MOH has begun a complete renovation of the first floor of MOH St. Paul – Midway, converting that space into a Work Performance Center similar to what exists in Eagan and Shakopee. In addition to Work Performance testing, FCE's and Work Conditioning will also be offered. The expected completion of this early March, 2021. We continue to evaluate work performance options in or near our Blaine clinic in the North Metro.

Authorization Form

Having applicants or employees bring in a clinic Referral Authorization form helps our schedulers and clinic staff choose the correct physical or drug test needed. Because there are so many different types of drug tests and exams that we perform, this will help us be better at providing the exact services that you require. Completed forms can also be emailed to mohscheduling@mohonline.com. If you need a new customized Referral Authorization form, please reach out to our Business Development/Consulting team.

Spring Scheduling Capacities

In anticipation of your spring hiring needs, MOH will work with you to arrange ongoing block scheduling for your new hires. Our goal is to reduce the number of scheduling calls you need to make. It is critical that you let us know if any of these blocks will not be used any given week. Once you know when your hiring will begin and the likely frequency of your preplacement screenings, email our scheduling team directly at mohscheduling@mohonline.com. Tell us the type and number of appointment's that you would like to block ahead of time. Please give us two week's advance notice when possible. Again, we ask that if your needs change, let us know as soon as possible so we can free up appointment's for other employers.

Drug testing

On-site drug testing continues to be available 24/7 for reasonable suspicion and post-accident. In addition, we will continue to schedule on-site collections for random's and for group new-hires if there are known days where you will be doing group hiring for a project. If you do not have onsite drug & alcohol collection services setup in your account or cannot find the Onsite Contact Form, please reach out to our Business Development/Consulting team, listed at the end of this letter.

For in-clinic testing we ask that your applicants or employees be in the clinic no later than 3:00pm to allow time for drinking water, etc.

Workers' Compensation

Any injuries that occur can walk into any of our 4 MOH clinic sites between 7:30am up to 4 pm. If an injured employee cannot arrive between these hours, attached is a map of our OrthoQUICK orthopedic urgent care sites which are open from 4pm 8pm M-F and on Saturday and Sunday from 8am to 8pm. The Summit Orthopedic OrthoQUICK phone number is (651) 968-5806. In the very near future, a 4th OrthoQUICK will be opening in Plymouth to help with your urgent after-hours orthopedic needs.

Any major or life threatening injury such as electrocution, lightning strikes and falls from heights should go directly to the closest emergency room because of the greater risk of multiple systems injury. If you are not sure, call MOH during our business hours at (651) 968-5300.

MOH injury care maps, "What to do in case of an injury" have tear off sheets showing our 4 clinics and the OrthoQUICK addresses. These can be made available for your office or jobsite. Please reach out to then Business Development/Consulting Team for these.

Spirometry /Respirator Clearance

MOH has invested in equipment, facilities and training to be able to resume spirometry (pulmonary function testing) for higher-risk respirator wearers. Because the filters and room air-cleaners take longer for us to safely turnover a room, we continue to limit spirometry to specific applications including silica, asbestos, SCBA and other workers where there is a high-frequency or significant exposure risk to environmental hazards. All other respirator clearances will continue to be screened with the respirator questionnaire if needed, a respirator exam. It is our expectation that as the Covid vaccine becomes widespread, our capacity to perform spirometry will return to normal.

Covid-19 Vaccination

MOH is actively working in conjunction with the Minnesota Department of Health to be able to provide COVID - 19 vaccinations to essential workers as the state works through its worker priority plan and as vaccine becomes available. The State of Minnesota is still working through their high-exposure and high-risk populations given the limited supply of the vaccine, so MOH is NOT CURRENTLY offering this to our employer partners. We will keep you posted as this service becomes available.

**Again thank you for your ongoing partnership!
We appreciate the opportunities to serve you and
your workers!**
